

ABSTRACT OF THE DISCLOSURE

An image output apparatus has an image output section that outputs an image in accordance with received image data, the image output section having a plurality of output modes mutually different from one another in output quality, and a correcting section. The correcting section transfers image data to the image output section upon application of processing of detection and correction of a predetermined inconvenience as to eyes in the image represented by the image data to the image data, or transfers image data to the image output section without application of processing of detection and correction of the predetermined inconvenience to the image data, in accordance with a situation as to whether an associated output mode of the image output section is a predetermined output mode which is relatively high in the output quality among the plurality of output modes.
